DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 4136540 Pegaz in view of McCormack USPN 5695868. Pegaz discloses a disposable absorbent article which comprising an impermeable backsheet, a liquid absorbing core, and a liquid permeable topsheet, which contains a skin care composition (Abstract).

Art Unit: 3761

Pegaz does not disclose the percentage of the materials in the composition. However, Pegaz teaches a liquid permeable liner having a skin care agent having components from the claimed groups of a waxes, emollients, viscosity increasing agents. The skin care composition of Pegaz is used in the same environment, on a disposable diaper and for a similar purpose – to alleviate skin irritation and dermatitis caused by wet skin (Use/Advantage paragraph). Therefore, the general conditions of the claimed invention are present in the prior art. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the article of Pegaz with the claimed percentage of materials in the skin care composition, since “where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation”, *In re Aller et al.* 105 USPQ 233.

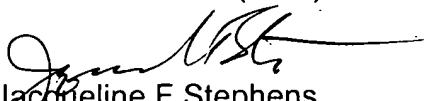

Pegaz does not teach a vapor permeable backsheet. McCormack discloses a breathable film/nonwoven composite suitable for use as an outer cover in absorbent articles (col. 1, lines 13-26 and col. 16, lines 23-27). McCormack discloses the breathable film/nonwoven has a water vapor transmission rate of $4100 \text{ g/m}^2/24 \text{ hrs.}$, which is within the range of claim 6 of the present invention, (col. 15, line 65 through col. 16, line 7) for the benefit of providing breathability and reducing skin hydration (col. 16, lines 9-27). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the article of Pegaz with a vapor permeable backsheet having the claimed water vapor transmission rate for the benefits disclosed in McCormack.
